

# Smart Calcium

Strongest tissues and longer post-harvest life of fruits

**Smart Calcium** is a concentrated suspension of calcium and organic extracts. The high concentration of calcium formulated does not generate toxicity due to excess of salts as a result of its low electrical conductivity. A 99% of the particles are below 5 microns, which guarantees their entry through the stomatal pores. Organic extracts source of antioxidants, alginic acid, laminarin, mannitol and secondary metabolites enhance the development of the crop, improve production and resist the different types of stress to which the crop can be exposed.

## Packaging Presentation

## Guaranteed Analysis

Total Calcium (CaO)	500,0 g/L
pH in 10% solution	10,2
Electric conductivity 1:100	0,07 dS/m
Density at 25°C	1,72 g/cm <sup>3</sup>

## Benefits of using Smart Calcium

Increases cell division and crop growth

Improves development of different tissues in plants.

Improve resistance of the tissues reducing pathogen's attacks impact

Increases tolerance to different types of stress.

Extend shelf life of your crops

Stimulates endogenous production of different hormones.

In order to increase nutrition efficiency, the recommendation must be generated by an Agricultural Engineer, based on soil and/or leaf tissue analysis. Likewise, the conditions of the soil, climate and phenological stage of the crop must be taken into account.
