

# Calcium 22.5 Ca

Strongest tissues and longer post-harvest life of fruits

**Calcium 22.5 Ca** is a concentrated suspension of calcium and organic extracts. The high concentration of calcium formulated does not generate toxicity due to excess of salts as a result of its low electrical conductivity. A 99% of the particles are below 5 microns, which guarantees their entry through the stomatal pores. Organic extracts source of antioxidants, alginate acid, laminarin, mannitol and secondary metabolites enhance the development of the crop, improve production and resist the different types of stress to which the crop can be exposed.
