

Induplant 0-31-20

Induces in the plant its own defense system

Induplant 0-31-20 is a Potassium Phosphite highly efficient product that increases the natural defenses of plants. Phosphite is a stimulator of the formation of Phytoalexins, which are compounds with antimicrobial effects. Induplant, once inside the plant, is metabolized as phosphate, so after stimulating resistance it becomes a nutrient that supplies the plant's needs for Phosphorus and Potassium. Although it is compatible with most agrochemicals, it is recommended to carry out compatibility tests by reaction of active ingredients or water quality.

Guaranteed Analysis

Available Phosphoric Acid (P_2O_5)	31%
Soluble Potash (K_2O)	20%

Derived from potassium hydroxide and phosphorous acid.
